DETAILED ACTION

Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1-4 are rejected under 35 U.S.C. 102(e) as being anticipated by Tozaki et al (US 5,729,516 and submitted by applicant).

Regarding claim 1, Tozaki et al discloses an information detecting apparatus (Figs. 7-8) comprising:

an extractor (the system control 100 of Fig. 7 for searchgin title X disclosed in col. 18, lines 42-51) for extracting data including specific information from a high-speed data stream; and

a detector (the system control 100 of Fig. 7 for detecting the copy flag CF1 disclosed in col. 18, lines 42-51) for detecting at low speed the specific information in the data extracted by said extractor.

Regarding claim 2, Tozaki et al also discloses the claimed wherein said extractor includes a buffer memory (track buffer 83 of Fig. 7, col. 14, lines 61-66) for storing a predetermined amount of data of the high-speed data stream; and

Application/Control Number: 09/848,501

Art Unit: 2616

a low-speed parser (the system control 100 of Fig. 7 for detecting the copy flag CF1 disclosed in col. 18, lines 42-51) for analyzing and outputting data including the specific information from the data stored in said buffer memory.

Regarding claim 3, Tozaki et al discloses the claimed wherein said extractor includes a high-speed parser (the system control 100 of Fig. 7 for searchgin title X disclosed in col. 18, lines 42-51) for analyzing and detecting data including the specific information in the high-speed data stream at a high speed; and

a buffer memory (PCI buffer 94 of Fig. 7, col. 16, lines 52-58) for storing the data including the specific information detected by said high-speed parser form the high-speed data stream.

Regarding claim 4, Tozaki et al discloses the claimed wherein the high-speed data stream is a data stream in an MPEG format (col. 7, lines 31-37); and

the data extracted by said extractor is pricture data showing I picture is the inherent characteristic of Tozaki et al because the GOP of MPEG 2 standard inherently includes I picture.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The cited references relate to watermark detector.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thai Tran whose telephone number is (571) 272-7382. The examiner can normally be reached on Mon. to Friday, 8:00 AM to 5:30 PM.

Art Unit: 2616

The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
